## UPGRADING RBC PLANTS

Issue 1, 1994

Earlier this year, we were excited to send out our new RBC Services brochure. In it, we describe the types of operational support and services we provide to the RBC industry.

In our efforts to continue providing this kind of support, this RBC Services UPDATE offers you material on RBC plant upgrades. We feel it is very important to give you the information vital to maintaining a high level of effluent quality from the equipment currently in use at your plant.

RBC Plant upgrades generally involve large capital investments to include engineering, equipment and installation costs. The information included with this UPDATE provides a method to upgrade RBC operations with a minimum of expense and effort.

As explained in the RBC Services brochure, many RBC plants are reaching their capacity regarding a hydraulic or an organic design.

The RBCs represent a major portion of the investment made by the city or industry to treat its wastewater. We offer you the opportunity to protect this investment in a manner which is efficient and most importantly, cost effective.

I would like to thank the hundreds of operators from around the U.S. and Canada for calling with their questions and requests for replacement RBC equipment needs. We are proud to assist in providing you with information and parts you need without all the run-around.

In the meantime, please review the following information. Should you have any questions about how an RBC UPGRADE can work for you, please do not hesitate to call RBC Services.

Together, we can get **MAXIMUM PERFORMANCE FROM YOUR RBCs.**
